

32-2117: ACYP1 Recombinant Protein

Alternative Name Acylphosphatase-1,Acylphosphatase,erythrocyte isozyme,Acylphosphatase,organ-common type isozyme,Acylphosphate phosphohydrolase 1,ACYP1,ACYPE.

Description

Source : Escherichia Coli. ACYP1 Human Recombinant fused with a 23 amino acid His tag at N-terminus produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 122 amino acids (1-99 a.a.) and having a molecular mass of 13.6kDa. The ACYP1 is purified by proprietary chromatographic techniques. Erythrocyte acylphosphatase (ACYP1) is a cytosolic enzyme which catalyzes the hydrolysis of the carboxyl-phosphate bond of acylphosphates. There are two acylphosphatase isoenzymes: ACYP1 and ACYP2. These isoenzymes share 60% homology and have the same substrate specificity, even though ACYP1 has a higher catalytic activity than ACYP2.
