## 32-2191: BLVRB Recombinant Protein

## Alternative Name:

FLR,BVRB,SDR43U1,MGC117413,BLVRB,Flavin reductase,FR,NADPH-dependent diaphorase,NADPHflavin reductase,Biliverdin reductase B,BVR-B,Biliverdin-IX beta-reductase,Green heme-binding protein, GHBP.

## Description

Source : Escherichia Coli. BLVRB Human Recombinant amino produced in E.Coli is a single, non-glycosylated polypeptide chain containing 206 amino acids having a molecular mass of 22.1 kDa.The BLVRB is purified by proprietary chromatographic techniques. BLVRB (EC 1.3.1.24) catalyzes electron transfer from reduced pyridine nucleotides to flavins as well as methylene blue, pyrroloquinoline quinone, riboflavin, or methemoglobin. BLVRB is involved in protecting cells from oxidative damage or in regulating iron metabolism. BLVRB converts biliverdin to bilirubin in the liver, converting a doublebond between the second and third pyrrole ring into a single-bond. BLVRB plays a role as in human erythrocytic heme catabolic pathway and most mammalian species. Biliverdin reductase is abundantly expressed in kidney, spleen, liver and brain as well as at lower levels in the thymus and minimal levels being detected in testis.

## Product Info

## Amount:

Purification :

## Content :

## Storage condition :

Amino Acid :
$50 \mu \mathrm{~g}$
Greater than $95.0 \%$ as determined by SDS-PAGE.
The protein contains 20 mM Tris- HCl buffer $\mathrm{pH} 8.5,10 \%$ glycerol, and 1 mM DTT.
Store at $4^{\circ} \mathrm{C}$ if entire vial will be used within 2-4 weeks. Store, frozen at $-20^{\circ} \mathrm{C}$ for longer periods of time. For long term storage it is recommended to add a carrier protein ( $0.1 \% \mathrm{HSA}$ or BSA).Avoid multiple freeze-thaw cycles.
