## 32-2216: CDO1 Recombinant Protein

Alternative Name : Cysteine dioxygenase type 1,Cysteine dioxygenase type I,CDO-I,CDO,CDO1.

## Description

Source : Escherichia Coli. CDO1 Human Recombinant fused with 37 amino acid His tag at N-terminus produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 207 amino acids (1-170 a.a.) and having a molecular mass of 23.9 kDa . The CDO1 is purified by proprietary chromatographic techniques. CDO1 (Cysteine dioxygenase) is a mammalian non-heme iron enzyme that initiates a number of significant metabolic pathways associated with pyruvate and several sulfurate compounds including sulfate, hypotaurine and taurine. CDO1 catalyzes the conversion of L-cysteine to cysteine sulfinic acid (cysteine sulfinate) by incorporation of dioxygen. CDO1 is a vital regulator of cellular cysteine concentrations and has an essential role in maintaining the hepatic concentration of intracellular free cysteine within a proper narrow range. CDO1 is able to alter intracellular cysteine levels and glutathione levels. CDO1 is highly expressed in the liver and placenta. On the other hand CDO1 has a low expression in heart, brain and pancreas. CDO1 can also be detected in hepatoblastoma HepG2 cells.

## Product Info

| Amount : | $50 \mu \mathrm{~g}$ |
| :---: | :---: |
| Purification : | Greater than 90.0\% as determined by SDS-PAGE. |
| Content : | The CDO1 solution contains 20 mM Tris buffer(pH 8.0), $10 \%$ glycerol and 1mM DTT. |
| Storage condition : | CDO1 although stable $4^{\circ} \mathrm{C}$ for 4 weeks, should be stored desiccated below $-18^{\circ} \mathrm{C}$. For long term storage it is recommended to add a carrier protein ( $0.1 \%$ HSA or BSA). Please prevent freezethaw cycles. |
