

32-2475: IYD Recombinant Protein

Alternative Name : Iodotyrosine dehalogenase 1,IYD-1,Iodotyrosine Deiodinase,IYD,C6orf71,DEHAL1,Iodotyrosine dehalogenase 1 isoform 3,dJ422F24.1,TDH4.

Description

Source : Escherichia Coli. IYD Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 214 amino acids (24-214 a.a) and having a molecular mass of 25.1kDa.IYD is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. IYD is an enzyme that catalyzes the oxidative NADPH-dependent deiodination of both mono- and diiodotyrosine although acts more efficiently on monoiodotyrosine. The N-terminus of Iodotyrosine Deiodinase , also known as IYD, plays a role as a membrane anchor. IYD acts during the hydrolysis of thyroglobulin to liberate iodide, which then reenter the hormone-producing pathways.

Product Info

Amount : 20 µg
Purification : Greater than 90.0% as determined by SDS-PAGE.
Content : IYD protein solution (1mg/ml) containing 20mM Tris-HCl buffer (pH 8.0), 0.4M UREA and 10% glycerol.
Storage condition : Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA).Avoid multiple freeze-thaw cycles.
