

## 32-2595: NDUF33 Recombinant Protein

**Alternative Name :** CI-30,NADH dehydrogenase [ubiquinone] iron-sulfur protein 3,mitochondria,Complex I-30kD,CI-30kD,NADH-ubiquinone oxidoreductase 30 kDa subunit.

### Description

Source : Escherichia Coli. Recombinant Human NDUF33 produced in E.Coli is a single, non-glycosylated polypeptide chain containing 249amino acids (37-264 a.a.) and having a molecular mass of 28.7 kDa. NDUF33 is fused to a 21 amino acid His Tag at N-terminus and purified by conventional chromatography techniques. NADH dehydrogenase [ubiquinone] iron-sulfur protein 3 (NDUF33) is a member of the complex I 30 kDa subunit family. NDUF33 is one of the iron-sulfur protein (IP) components of mitochondrial NADH:ubiquinone oxidoreductase (complex I). This complex is the first enzyme complex in the electron transport chain of mitochondria. The iron-sulfur protein (IP) fraction of complex I consists of seven subunits. NDUF33 gene mutations are linked with Leigh syndrome resulting from mitochondrial complex I inefficiency.
