

32-2608: NMNAT2 Recombinant Protein

Alternative Name : Nicotinamide Nucleotide Adenylyltransferase 2,C1orf15,Nicotinate-Nucleotide Adenylyltransferase 2,NaMN Adenylyltransferase 2,NMN Adenylyltransferase 2,PNAT2, KIAA0479,Chromosome 1 Open Reading Frame 15

Description

Source : Escherichia Coli. NMNAT2 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 327 amino acids (1-307 a.a) and having a molecular mass of 36.6kDa.NMNAT2 is fused to a 20 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Nicotinamide Nucleotide Adenylyltransferase 2, also known as NMNAT2 is a member of the nicotinamide mononucleotide adenylyltransferase (NMNAT) enzyme family, members of which catalyze a vital step in NAD (NADP) biosynthetic pathway. Unlike the other human family member, which is localized to the nucleus, and is ubiquitously expressed; NMNAT2 is cytoplasmic, and is predominantly expressed in the brain. Two transcript variants encoding different isoforms have been found for NMNAT2. Among the diseases associated with NMNAT2 are tauopathy, and systemic lupus erythematosus.
