

## 32-2719: PPP1R1A Recombinant Protein

**Alternative Name :** IPP1,IPP-1,I-1,PPP1R1A,PPI-1,Protein Phosphatase Inhibitor-1,Protein phosphatase 1 regulatory subunit 1A.

### Description

Source : Escherichia Coli. PPP1R1A Human Recombinant fused with His tag at C-terminus produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 179 amino acids and having a molecular mass of 20 kDa.The PPP1R1A is purified by proprietary chromatographic techniques. PPP1R1A is an inhibitor of protein-phosphatase 1. IPP-1 protein plays important in hormonal control of glycogen metabolism. Hormones that elevate intracellular cAMP elevate IPP-1 activity. PPP1R1A activation caused cAMP to control over proteins that are not directly phosphorylated by PKA following a rise in intracellular calcium, IPP-1 is inactivated by calcineurin (PP2B). Multiple domains in IPP-1 target cellular PP1 complexes. PPP1R1A is a cellular regulator of eIF2 alpha phosphorylation.
