## 32-2833: T4 DNA Recombinant Protein

Alternative Name: DNA ligase 4,EC 6.5.1.1,DNA ligase IV,Polydeoxyribonucleotide synthase [ATP] 4.

## **Description**

Source: Escherichia Colilambda lysogen NM 989. T4 DNA Ligase catalyzes the formation of a phosphodiester bond between juxtaposed 5'-phosphate and 3'-hydroxyl termini in duplex DNA or RNA. This enzyme will join blunt end and cohesive end termini as well as repair single stranded nicks in duplex DNA, RNA or DNA/RNA hybrids.

## **Product Info**

Amount: 100000IU

**Content:** 50mM KCl, 10mM Tris-HCl (pH 7.4), 0.1mM EDTA, 1mM DTT, 200 μg/ml BSA and 50% glycerol.

50mM KCl, 10mM Tris-HCl (pH 7.4), 0.1mM EDTA, 1mM DTT, 200 μg/ml BSA and 50% glycerol.

Storage condition: Store at -20C. 50mM KCl, 10mM Tris-HCl (pH 7.4), 0.1mM EDTA, 1mM DTT, 200 µg/ml BSA and

50% glycerol. Store at -20C.

## **Application Note**

One Weiss unit is equivalent to circa 67 cohesive-end ligation units.• T4 DNA Ligase is strongly inhibited by NaCl or KCl if the concentration is > 200 mM.• Ligation of blunt-ended and single-base pair overhang fragments requires about 50 times as much enzyme to achieve the same extent of ligation as cohesive-end DNA fragments. Blunt-end ligation may be enhanced by addition of PEG 4000 (10% w/v final concentration) or hexamine chloride, or by reducing the ATP concentration to  $50\mu\text{M}$ .• To dilute T4 DNA Ligase that will subsequently be stored at  $-20^{\circ}\text{C}$ , 50% glycerol storage buffer should be used; to dilute for immediate use, 1x T4 DNA Ligase reaction buffer can be used.
