32-2927: Urokinase Native Protein

Alternative Name: Urokinase, Abbokinase, Urokinase-type Plasminogen Activator, uPA, EC 3.4.21.73, UK.

Description

Source: Human urine. Urokinase is a two-chain glycoprotein containing 411 amino acids with 12 disulfide bonds. Its molecular weight is 54,000 Dalton. Urokinase (UK) is a serine protease, which is one of biological plasminogen activators. It is involved in a number of biological functions including fibrinolysis, embryogenesis, cell migration, tissue remodeling, ovulation, and wound healing. It can be obtained from human urine or kidney cell culture.

Product Info

Amount: 1 mg

Purification: Greater than 94.0% as determined by SDS-PAGE.

The Urokinase was lyophilized from a concentrated (1mg/ml) solution containing phosphate Content:

buffer.

Lyophilized Urokinase although stable at room temperature for 3 weeks, should be stored Storage condition:

desiccated below -18°C. Upon reconstitution Urokinase should be stored at 4°C between 2-7

days and for future use below -18°C.Please prevent freeze-thaw cycles.

Application Note

It is recommended to reconstitute the lyophilized Urokinase in sterile $18M\Omega$ -cm H2O not less than $100\mu g/ml$, which can then be further diluted to other aqueous solutions.
