

## 32-3317: BCL7C Recombinant Protein

**Alternative Name :** B-Cell CLL/Lymphoma 7C,B-Cell CLL/Lymphoma 7 Protein Family Member C,BCL7C.

### Description

Source : Escherichia Coli. BCL7C Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 240 amino acids (1-217 a.a) and having a molecular mass of 25.9kDa (Molecular size on SDS-PAGE will appear higher).BCL7C is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. B-cell CLL/lymphoma 7C (BCL7C) is identified by the likeness of its product to the N-terminal region of BCL7A protein. The BCL7A protein is encoded by the gene which is directly involved in a three-way gene translocation in a Burkitt lymphoma cell line. The function of the BCL7C gene has not been determined yet.

### Product Info

|                            |                                                                                                                                                                                                                                                                                     |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Amount :</b>            | 10 µg                                                                                                                                                                                                                                                                               |
| <b>Purification :</b>      | Greater than 85% as determined by SDS-PAGE.                                                                                                                                                                                                                                         |
| <b>Content :</b>           | BCL7C protein solution (0.25mg/ml) containing 20mM Tris-HCl buffer (pH 8.0), 0.15M NaCl, 20% glycerol and 1mM DTT.                                                                                                                                                                  |
| <b>Storage condition :</b> | Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA).Avoid multiple freeze-thaw cycles.                                                 |
