

32-3632: CTBP1 Recombinant Protein

Alternative Name : EC 1.1.1.1,BARS,MGC104684,CTBP1,C-terminal-binding protein 1,CTBP.

Description

Source : Escherichia Coli. CTBP1 produced in E.Coli is a single, non-glycosylated polypeptide chain containing 440 amino acids (1-440 a.a.) and having a molecular mass of 47.5kDa. CTBP1 is purified by proprietary chromatographic techniques. CTBP1 participates in controlling the equilibrium between tubular and stacked structures in the Golgi complex. CTBP1 functions in brown adipose tissue differentiation. CTBP1 has dehydrogenase activity. CTBP1 binds to the C-terminus of adenovirus E1A proteins. CTBP1 phosphoprotein is a transcriptional repressor and that takes part during cellular proliferation. CTBP1 & CTBP2 can dimerize and interact with a polycomb group protein complex which is involved in regulation of gene expression during development.
