## 32-3670: Desmin Recombinant Protein

Alternative Name: Desmin, DES, CSM1, CSM2, CMD11, FLJ12025, FLJ39719, FLJ41013, FLJ41793.

## **Description**

Source: Escherichia Coli. Desmin Human Recombinant having a calculated molecular mass of 53,539 Dalton, showing a 55kDa band on SDS-page, pl-5.16. Desmin is a muscle-specific class III intermediate filament. Homopolymers of this protein form a stable intracytoplasmic filamentous network connecting myofibrils to each other and to the plasma membrane. Mutations in this gene are associated with desmin-related myopathy, a familial cardiac and skeletal myopathy (CSM), and with distal myopathies.

## **Product Info**

**Amount :** 20 μg

**Purification:** Greater than 95.0% as determined by SDS-PAGE.

Content:

Desmin was lyophilized from a 1mg/ml solution containing 30mM Tris-HCl pH 8, 9.5M urea, 2mM

DTT, 2mM EDTA and 10mM methylammonium chloride.

Lyophilized Desmin although stable at room temperature for 3 weeks, should be stored

Storage condition:

desiccated below -18°C. Upon reconstitution Desmin should be stored at 4°C between 2-7 days

and for future use below -18°C.For long term storage it is recommended to add a carrier protein

(0.1% HSA or BSA). Please prevent freeze-thaw cycles.

## **Application Note**

It is recommended to reconstitute the lyophilized Desmin in sterile  $18M\tilde{A}\Box\hat{A}\odot$ -cm H2O not less than  $100\tilde{A}\Box\hat{A}\mu g/ml$ , which can then be further diluted to other agueous solutions.
