

## 32-3696: DYNLL2 Recombinant Protein

**Alternative Name** Dynein light chain LC8-type 2, DNCL1B, Dlc2, MGC17810, RSPH22, 8kDa dynein light chain  
:  
b, DLC8b, dynein light chain 2 cytoplasmic, radial spoke 22 homolog.

### Description

Source : Escherichia Coli. DYNLL2 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 109 amino acids (1-89a.a) and having a molecular mass of 12.5kDa. DYNLL2 is fused to a 20 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Dyneins are multi-subunit, high molecular weight ATPases which cooperate with microtubules to create energy by altering the chemical energy of ATP into the mechanical energy of movement. DYNLL2 is a large protein complex made up of six different subunits and is in charge of a large number of intracellular movements to the minus ends of microtubules. DYNLL2 is an extremely conserved eukaryotic hub protein with dozens of binding partners and numerous roles other than being a subunit of dynein and myosin Va motor proteins.

### Product Info

**Amount :** 20 µg  
**Purification :** Greater than 90.0% as determined by SDS-PAGE.  
**Content :** DYNLL2 protein solution (1 mg/1ml) containing 20mM Tris-HCl buffer (pH8.0), 30% glycerol, 0.2M NaCl and 1mM DTT.  
**Storage condition :** DYNLL2 although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.  
**Amino Acid :** MGSSHHHHHH SSGLVPRGSH MSDRKAVIKN ADMSEDMQQD AVDCATQAME KYNIEKDIAA YIKKEFDKKY NPTWHCIVGR NFGSYVTHET KHFIYFYLGG VAILLFKSG
