## 32-3801: FABP7 His Recombinant Protein

Alternative MRG,BLBP,FABPB,B-FABP,DKFZp547J2313,Fatty acid-binding protein brain,Fatty acid-binding protein

Name: 7,Brain lipid-binding protein,Mammary-derived growth inhibitor related,FABP7.

## **Description**

Source: Escherichia Coli. FABP7 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 132 amino acids and having a molecular mass of 19.39kDa. FABP7 is fused to His-Tag at N-terminus and purified by standard chromatography techniques. FABP7 is a brain fatty acid binding protein. Fatty acid binding proteins (FABPs) are a family of small, highly conserved, cytoplasmic proteins that bind long-chain fatty acids and other hydrophobic ligands. FABPs are are inovlved in fatty acid uptake, transport, and metabolism. FABP7 is expressed in radial glia by the activation of Notch receptors and binds DHA with the highest affinity among all of FABPs. FABP7 plays an important role in transport of hydrophobic ligand with potential morphogenic activity during cns development. FABP7 is required for the establishment of the radial glial fiber system in developing brain, a system that is necessary for the migration of immature neurons to establish cortical layers (by similarity).

## **Product Info**

**Amount :** 25 μg

**Purification:** Greater than 95.0% as determined by SDS-PAGE.

**Content:** The FABP7 protein solution contains 20mM Tris-HCl pH-8 and 50% Glycerol.

Storage condition:

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods

of time. Avoid multiple freeze-thaw cycles.
