

32-3804: FAIM Recombinant Protein

Alternative Name : FAIM1,Fas Apoptotic Inhibitory Molecule,FAIM2,LFG,NMP35, Fas Apoptotic Inhibitory Molecule 1,FAIM.

Description

Source : Escherichia Coli. FAIM Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 236 amino acids (1-213aa) and having a molecular mass of 26.4kDa.FAIM is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Fas apoptotic inhibitory molecule, also known as FAIM function as an inducible effector molecule which mediates Fas resistance produced by surface Ig engagement in B cells. In addition FAIM protects against death receptor-triggered apoptosis and regulates B-cell signaling and differentiation. Among the diseases associated with FAIM are hemorrhagic thrombocythemia, and food allergy.
