

32-3816: FBXO2 Recombinant Protein

Alternative Name : F-box only protein 2,FBXO2,F-Box Protein 2,FBX2,FBG1,Fbs1,NFB42,OCP1.

Description

Source : Escherichia Coli. FBXO2 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 319 amino acids (1-296 a.a.) and having a molecular mass of 35.7kDa.FBXO2 is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. F-Box Protein 2 (FBXO2) is a part of the F-box protein family. The F-box proteins are one of the 4 subunits of the ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which takes part in phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes. FBXO2 belongs to the Fbx class which contains either different protein-protein interaction modules or no recognizable motifs. FBXO2 is extremely similar to the rat neural F Box 42 kDa protein which is enriched in the nervous system and plays a role in maintaining neurons in a postmitotic state.
