

32-4255: Recombinant Human Myxovirus Resistance 1

Alternative Name :

MX Dynamamin-Like GTPase 1, Interferon-Regulated Resistance GTP-Binding Protein MxA, Interferon-Inducible Protein P78, Interferon-Induced Protein P78, Myxoma Resistance Protein 1, IFI-78K, IFI78, MX, Myxovirus (Influenza) Resistance 1, Homolog Of

Description

Source : Escherichia Coli. MX1 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 685 amino acids (1-662 a.a) and having a molecular mass of 77.9kDa. MX1 is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Myxovirus Resistance 1, also known as MX1 is a guanosine triphosphate (GTP)-metabolizing protein which takes part in the cellular antiviral response. MX1 is induced by type I and type II interferons, and also antagonizes the replication process of some different RNA & DNA viruses. In addition, there is a related gene located adjacent to MX1 on chromosome 21, and there are multiple pseudogenes positioned in a cluster on chromosome 4.

Product Info

Amount :

20 µg

Purification :

Greater than 85% as determined by SDS-PAGE.

Content :

MX1 protein solution (0.25mg/ml) containing Phosphate buffered saline (pH7.4), 10% glycerol and 1mM DTT.

Storage condition :

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.

Amino Acid :
