

## 32-4291: Recombinant Human Nuclear Cap Binding Protein Subunit 2

**Alternative Name :** CBP20,NIP1,Cell Proliferation-Inducing Gene 55 protein,NCBP-Interacting Protein 1,Cbc2,CBC2.

### Description

Source : Escherichia Coli. NCBP2 produced in E.Coli is a single, non-glycosylated polypeptide chain containing 176 amino acids (1-156a.a.) and having a molecular mass of 20.1kDa.NCBP2 is fused to a 20 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. NCBP2 is a part of the nuclear cap-binding protein complex (CBC) that binds to the monomethylated 5' cap of nascent pre-mRNA in the nucleoplasm. NCBP2 protein has an RNP domain usually located in RNA binding proteins, and contains the cap-binding activity. CBC promotes pre-mRNA splicing, 3'-end processing, RNA nuclear export, and nonsense-mediated mRNA decay.
