## 32-4745: Recombinant Human S100 Calcium Binding Protein A6

Alternative NameProtein S100-A6,Calcyclin,Growth factor-inducible protein 2A9,MLN 4,Prolactin receptor-associated<br/>protein,PRA,S100 calcium-binding protein A6,S100A6,CACY,2A9,5B10,CABP.

## Description

Source : Escherichia Coli. S100A6 Human Recombinant fused with a 20 amino acid His tag at N-terminus produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 110 amino acids (1-90 a.a.) and having a molecular mass of 12.3kDa. The S100A6 is purified by proprietary chromatographic techniques. S100A6 is a member of the S100 family of proteins containing 2 EF-hand calcium-binding motifs. S100 proteins are localized either in the cytoplasm or the nucleus of a wide range of cells. S100 proteins are involved in the regulation of a number of cellular processes such as cell cycle progression and differentiation. There are at least 13 members in the S100 gene family, which are located as a cluster on chromosome 1q21. S100A6 may function in stimulation of Ca2+-dependent insulin release, stimulation of prolactin secretion, and exocytosis. Chromosomal rearrangements and altered expression of the S100A6 gene are implicated in melanoma.
