

## 32-5229: Recombinant Human Vesicular Overexpressed in Cancer, Prosurvival Protein 1

### Alternative Name :

Vesicular overexpressed in cancer pro-survival protein 1, EGFR-co-amplified and overexpressed protein, ECOP, Glioblastoma-amplified secreted protein, Putative NF-kappa-B-activating protein 055N, VOPP1, ECOP, GASP, FLJ20532, DKFZp564K0822.

### Description

Source : Escherichia Coli. VOPP1 Human Recombinant fused with a 21 amino acid His tag at N-terminus produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 112 amino acids (82-172 a.a.) and having a molecular mass of 12kDa. The VOPP1 is purified by proprietary chromatographic techniques. Vesicular overexpressed in cancer pro-survival protein 1 (VOPP1) has been previously shown to be over-expressed in human glioblastoma multiform and squamous cell carcinoma. VOPP1 is a crucial regulator of NF-kappaB signaling, and this high-level, amplification-mediated VOPP1 expression, such as that occurring in tumors with amplified EGFR, might impact the resistance to apoptosis.
