

32-5231: Recombinant Human Vacuolar Protein Sorting 24

Alternative Name : Charged multivesicular body protein 3,Chromatin-modifying protein 3,Neuroendocrine differentiation factor,Vacuolar protein sorting-associated protein 24,hVps24,CHMP3,CGI149,NEDF,VPS24,CGI-149.

Description

Source : Escherichia Coli. VPS24 produced in E.Coli is a single, non-glycosylated polypeptide chain containing 242 amino acids (1-222 a.a) and having a molecular mass of 27.2kDa (Molecular weight on SDS-PAGE will appear higher).VPS24 is fused to a 20 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Charged multivesicular body protein 3 (VPS24/CHMP3) is a member of the vacuolar sorting protein family and function as chromatin modifying proteins. VPS24 links directly with CHMP2 and CHMP4 for the disassembly of ESCRT-III complex in an ATP-dependent manner. During HIV-1 infection, the virus uses the ESCRT-III complex to mediate budding and exocytosis of viral proteins. VPS24 overexpression strongly hinders HIV-1 release.
