## 32-5299: Recombinant Human DnaJ (Hsp40) Homolog, Subfamily C, Member 19

Alternative Name : Mitochondrial import inner membrane translocase subunit TIM14,Dnaj homolog subfamily C member 19,DNAJC19,TIM14,TIMM14,Pam18.

## Description

Source : Escherichia Coli. DNAJC19 Human Recombinant fused with a 37 amino acid His tag at N-terminus produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 135 amino acids (19-116 a.a.) and having a molecular mass of 15.1 kDa . The DNAJC19 is purified by proprietary chromatographic techniques. DNAJC19 is part of a complex involved in the ATP-dependent transport of transit peptide-containing proteins from the inner cell membrane to the mitochondrial matrix. DNAJC19 is a single-pass membrane protein which contains a J domain and is localized to the inner membrane of the mitochondrion. Expressed ubiquitously, DNAJC19 acts as a component of the mitochondrial DNAJC19 complex that is responsible for the ATP-dependent translocation of select proteins from the inner mitochondrial membrane to the mitochondrial matrix. Defects in the DNAJC19 gene are the cause of 3-methylglutaconic aciduria type 5 (MGA5), otherwise known as dilated cardiomyopathy with ataxia (DCMA).

## Product Info

## Amount:

## Purification :

## Content :

## Storage condition :

Amino Acid :
$25 \mu \mathrm{~g}$
Greater than $90.0 \%$ as determined by SDS-PAGE.
The DNAJC19 solution ( $1 \mathrm{mg} / \mathrm{ml}$ ) contains 20 mM Tris-HCl buffer ( pH 8.0 ), $10 \%$ glycerol, 2 mM DTT and 0.1 M NaCl .
Store at $4^{\circ} \mathrm{C}$ if entire vial will be used within 2-4 weeks. Store, frozen at $-20^{\circ} \mathrm{C}$ for longer periods of time. For long term storage it is recommended to add a carrier protein ( $0.1 \% \mathrm{HSA}$ or BSA).Avoid multiple freeze-thaw cycles.
