32-5326: Recombinant Human Heat Shock Protein 20

Alternative Name: Heat Shock Protein 20.HSP20.

Description

Source: Escherichia Coli. Heat Shock Protein 20 Human Recombinant produced in E.Coli. Hsp20 is a mammalian small heatshock protein family that is found most copiously in skeletal muscle and heart. The heat-shock proteins seem to act as chaperones that can protect other proteins against heat-induced denaturation and aggregation. The Hsp20 family is characterized structurally by the presence of a conserved C-terminal domain of about 100 residues and contains a betasandwich fold consisting of 8 strands in 2 beta-sheets in a 'Greek-key' topology. Hsp20 proteins have a tendency to form dimers, through a disulphide linkage formed by an N-terminal cysteine, low heat stability and a poor chaperoning ability in comparison with other family members.

Product Info

Amount: 10 µg

Purification: Greater than 95.0% as determined by SDS-PAGE.

HSP20 lyophilized from 20mM Tris-acetate, pH-7.6, 10mM NaCl, 0.1mM EDTA, 0.1mM PMSF and Content:

15mM b-mercaptoethanol.

HSP20 although stable at 10°C for 2 weeks, should be stored desiccated below -18°C. For long Storage condition:

term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please prevent

freeze-thaw cycles.
