

32-5327: Recombinant Human Heat Shock Protein 27

Alternative Name HSPB1,CMT2F,HMN2B,HSP27,HSP28,HSP25,Heat shock protein beta-1,Heat shock 27 kDa protein,Stress-responsive protein 27,SRP27,HS.76067,DKFZp586P1322.

Description

Source : Escherichia Coli. Recombinant Human HSP-27 produced in E.Coli is a single, non-glycosylated polypeptide chain containing 205 amino acids and having a molecular mass of 22.7 kDa. Hsp27 was over-expressed in E. coli and purified by conventional chromatography. HSP27 (also known as the Estrogen-Regulated 24K protein, and hsp 28) is a member of the mammalian small heat shock protein family. Hsp27 is expressed constitutively in many tissues and its expression is increased to high levels after various types of stress including elevated temperatures, toxic metals, drugs and oxidants. Also, Hsp27 is phosphorylated in vivo on three phosphorylation sites (Ser15, Ser78 and Ser82) by protein kinases including MAPKAP kinase 2 and the stress-activated protein kinase SAPK2 (p38).
