32-5511: Recombinant HepatitisE VirusORF2 (403-461)

Description

Source: The e.coli derived HEV protein is fused with beta-galactosidase at the N-Terminus and contains the HEV immunodominant regions from ORF2 403-461 a.a. Hepatitis E virus (HEV), the major etiologic agent of enterically transmitted non-A, non-B hepatitis worldwide, is a spherical, non-enveloped, single stranded RNA virus that is approximately 32 to 34 nm in diameter. HEV belongs to a genus of HEV-like viruses (unassigned genus). HEV has a single-stranded polyadenylated RNA genome of approximately 8 kb. Based on its physicochemical properties it is presumed to be a calicilike virus.

Product Info

Amount: 0.5 mg

Purification: HEV ORF2 Protein is >95% pure as determined by 10% PAGE (coomassie staining).

Content: 20mM Tris-HCl pH-8, 8M urea and 10mM B-ME.

Storage condition: HEV ORF2 protein although stable at 4°C for 1 week, should be stored below -18°C. Please

prevent freeze thaw cycles.
