

## 32-5538: Recombinant Varicella Zoster Virus gE

### Description

Source : The E.Coli derived recombinant protein contains the VZV gE immunodominant regions, amino acids 48-135 and fused to a GST-Tag at C-terminus. VZV is closely related to the herpes simplex viruses(HSV), sharing much genome homology. The known envelope glycoproteins (gB, gC, gE, gH, gI, gK, gL) correspond with those in HSV, however there is no equivalent of HSV gD. VZV virions are spherical and 150-200 nm in diameter. Their lipid envelope encloses the nucleocapsid of 162 capsomeres arranged in a hexagonal form. Its DNA is a single, linear, double-stranded molecule, 125,000 nt long. The virus is very susceptible to disinfectants, notably sodium hypochlorite. Within the body it can be treated by a number of drugs and therapeutic agents including aciclovir, zoster-immune globulin(ZIG), and vidarabine.

### Product Info

<b>Amount :</b>	0.5 mg
<b>Purification :</b>	Varicella protein is >95% pure as determined by 10% PAGE (coomassie staining).
<b>Content :</b>	25mM Tris pH 7.2, 1mM EDTA and 50% glycerol.
<b>Storage condition :</b>	Varicella Protein although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.
