(GP75), Melanoma antigen gp75, Tyrosinase-related protein 1 (TYRP1), TYRRP

**Isotype:** Rabbit IgG

Immunogen Information: Recombinant human full-length TYRP1 protein

## **Description**

It reacts with a 75kDa melanocyte-specific gene product, identified as Tyrosinase-related protein-1 (TRP-1). It is involved in melanin synthesis. TRP1 is present on the melanosomal membranes of melanoma, normal melanocytes and nevi. Recent evidence suggests that TRP-1 is involved in maintaining stability of tyrosinase protein and modulating its catalytic activity. TRP-1 is also involved in maintenance of melanosome ultrastructure and affects melanocyte proliferation and cell death.
