

Figure 2: ELISA of human immunoglobulins shows Clone: RM122 reacts only to human IgE Lambda from human myeloma plasma and the IgE from human plasma. No cross reactivity with Human IgG, IgM, IgD, or IgA. The plate was coated with 50 ng/well of different immunoglobulins. 200 ng/mL, 50 ng/mL or 10 ng/mL of Clone: RM122 was used as the primary antibody. An alkaline phosphatase conjugated anti-rabbit IgG as the secondary antibody.

Figure 3: A titer ELISA using Clone: RM122. The plate was coated with different amounts of human IgE. A serial dilution of Clone: RM122 was used as the primary antibody. An alkaline phosphatase conjugated anti-rabbit IgG as the secondary antibody.
