Description

Molecular chaperone that promotes the maturation, structural maintenance and proper regulation of specific target proteins involved for instance in cell cycle control and signal transduction. Undergoes a functional cycle that is linked to its ATPase activity. This cycle probably induces conformational changes in the client proteins, thereby causing their activation. Interacts dynamically with various co-chaperones that modulate its substrate recognition, ATPase cycle and chaperone function.

Figure 1: Western blot analysis of Hsp90 Antibody (10-6621) with lysates Lane 1: Hela, Lane 2: K562, Lane 3: HepG2, Lane 4: mouse NIH/3T3, Lane 5: A2058, Lane 6: T47D cell line. Hsp90 Antibody was diluted at 1:1000 at each lane. A goat anti-mouse IgG H& L(HRP) at 1:10000 dilution was used as the secondary antibody. Lysates at 20µg per lane.
