subunit; Cdk7; Cak, Cak1

**Isotype:** Mouse IgG2b

Immunogen Information: Recombinant human Cdk7 protein.

## **Description**

CDK-activating kinases(CAKs) are multisubunit proteins that phosphorylate and thus activate certain cyclin-dependent protein kinases in the regulation of cell cycle progression. Cyclin dependent kinase7(CDK7) gene is mapped to chromosome 2p15-cen. CDK7 functions in both cyclin binding and T-loop phosphorylation and that these 2 steps of CDK1 activation are mutually dependent.
