

32-7044: Recombinant Human Myelin Oligodendrocyte Glycoprotein/MOG

Gene : MOG
Gene ID : 4340
Uniprot ID : Q16653

Description

Source: E.coli.
MW :15.2kD.

Recombinant Human Myelin Oligodendrocyte Glycoprotein is produced by our E.coli expression system and the target gene encoding Gly30-Gly154 is expressed with a 6His tag at the C-terminus. Myelin Oligodendrocyte Glycoprotein (MOG) is a transmembrane protein, which is expressed exclusively in the CNS. MOG contains a single Ig-domain exposed to the extracellular space that allows autoantibodies easy access. MOG protein has been identified as a crucial autoantigen for multiple sclerosis in humans. MOG is capable to produce a demyelinating multiple sclerosis-like diseases in experimental animals, namely experimental autoimmune encephalomyelitis (EAE), in rodents and monkeys.

Product Info

Amount : 10 µg / 50 µg
Content : Lyophilized from a 0.2 µm filtered solution of 20mM HAc-NaAc, 150mM NaCl, pH 4.5.
Storage condition : Lyophilized protein should be stored at -20°C, though stable at room temperature for 3 weeks. Reconstituted protein solution can be stored at 4-7°C for 2-7 days. Aliquots of reconstituted samples are stable at -20°C for 3 months.
Amino Acid : MGQFRVIGPRHPHALVGLDEVELPCRISPGKNATGMEVGWYRPPFSRVVHLYRNGKDKDGDQAPEYRGRTLLKDAIGEGKVTLRIRNVRFSDGEGFTCFRDHSYQEEAAMELKVEDPFYWVSPGHHHHHH

Application Note

Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100 µg/ml. Dissolve the lyophilized protein in ddH₂O. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

Endotoxin : Less than 0.1 ng/µg (1 IEU/µg) as determined by LAL test.

Biological Activity : Tested for capability to induce EAE in rodents and monkeys
