

32-7264: Recombinant Human MOB-Like Protein Phoecin/MOB4/MOBKL3 (N-6His)

Gene : MOB4
Gene ID : 25843
Uniprot ID : Q9Y3A3

Description

Source: E.coli.
MW :28.2kD.

Recombinant Human MOB-Like Protein Phoecin is produced by our E.coli expression system and the target gene encoding Met1-Ala225 is expressed with a 6His tag at the N-terminus. MOB-Like Protein Phoecin is a member of the MOB1/Phoecin Family. MOB-Like Protein Phoecin is associated with membranes and the Golgi stacks. It is present in the cytosol, where it behaves as a protein complex. It has been shown that MOB-Like Protein Phoecin interacts with DNM1, EPS15 and Nucleoside Diphosphate Kinase. MOB-Like Protein Phoecin is the major partner of Striatin Family members and may play a important role in membrane trafficking, specifically in membrane budding reactions.
