**Gene :** KLK4  
**Gene ID :** 9622  
**Uniprot ID :** Q9Y5K2

### Description

Source: Human Cells.  
MW :25.44kD.

Recombinant Human Kallikrein 4 is produced by our Mammalian expression system and the target gene encoding Ser27-Ser254 is expressed with a 6His tag at the C-terminus. Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many Kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. This gene is one of the fifteen members of the Kallikrein subfamily located in a cluster on chromosome 19. Its encoded protein is secreted and may play a role in suppression of tumorigenesis in breast and prostate cancers. Alternate splicing of this gene results in multiple transcript variants encoding the same protein.
