Description

Source: Human Cells.

MW :21.7kD.

Recombinant Human CLEC4E is produced by our Mammalian expression system and the target gene encoding Arg41-Leu219 is expressed with a 6His tag at the C-terminus. C-Type Lectin Domain Family 4 Member E (CLEC4E) is a 219 amino acid single-pass type II membrane protein that contains one C-type Lectin domain. It is expressed in monocytes, CLEC4E functions as a downstream target of C/EBP beta and is thought to play a role in the inflammatory response, possibly via transcriptional control of C/EBP beta. CLEC4E may play a role in the response to inflammatory stimuli in peritoneal macrophages and may be involved in immune surveillance processes under transcriptional control of CEBPB. Human CLEC4E shares 67% sequence identity with its mouse counterpart, suggesting a similar function between species. CLEC-4E exists as multiple alternatively spliced isoforms that are encoded by a gene which maps to a natural killer gene complex region on human chromosome 12.
