Description

Source: Human Cells.

MW :13.75kD.

Recombinant Human Secreted and Transmembrane Protein 1 is produced by our Mammalian expression system and the target gene encoding Gln29-Gly145 is expressed with a 6His tag at the C-terminus. Secreted and Transmembrane Protein 1 (SECTM1) is a transmembrane and secreted protein that belongs to the SECTM family. SECTM1 is expressed in a perinuclear Golgi-like pattern. It is detected at the highest levels in peripheral blood leukocytes and breast cancer cell lines. SECTM1 is considered to participate in thymocyte signaling and the hematopoietic/immune system processes. It is reported that SECTM1 is a broadly expressed, IFN- gamma -inducible molecule, which functions as a potent costimulatory ligand for T cell activation and is synergistic with anti-CD28.
