Gene : CTHRC1
Gene ID : 115908
Uniprot ID : Q96CG8

Description

Source: Human Cells.
MW :24.1kD.

Recombinant Human CTHRC1 in 293 HEK mammalian expression system and the target gene encoding Ser31-Lys243 is expressed with a 6His tag at the C-terminus. Collagen triple helix repeat-containing protein 1 is a protein that in humans is encoded by the CTHRC1 gene. It acts as a negative regulator of collagen matrix deposition. It may cause the disease of Barrett esophagus . Patients with Barrett esophagus have an increased risk of esophageal adenocarcinoma. The main cause of Barrett esophagus is gastroesophageal reflux. The retrograde movement of acid and bile salts from the stomach into the esophagus causes prolonged injury to the esophageal epithelium and induces chronic esophagitis, which in turn is believed to trigger the pathologic changes.
