

32-8063: Recombinant Human GADD45 beta/GADD45B (N-6His)

Gene : GADD45B

Gene ID : 4616

Uniprot ID : O75293

Description

Source: E.coli.

MW :20kD.

Recombinant Human GADD45B is produced by our E.coli expression system and the target gene encoding Met1-Arg160 is expressed with a 6His tag at the N-terminus. Growth Arrest and DNA Damage-Inducible Protein GADD45 beta (GADD45B) is a member of the GADD45 family. GADD45B has been shown to interact with MAP3K4, ASK1, MAP2K7, and GADD45GIP1. GADD45B is involved in the regulation of growth and apoptosis. GADD45B reacts to environmental stresses by mediating activation of stress-responsive MTK1/MEKK4 kinase, which is an upstream activator of both p38 and JNK MAPKs. In addition, GADD45B participates in the down-regulation of hepatocellular carcinoma (HCC). It may serve as a possible therapeutic target.
