

32-8089: Recombinant Human High Mobility Group Protein B1/HMGB1

Gene : HMGB1

Gene ID : 3146

Uniprot ID : P09429

Description

Source: E. coli.

MW :10.5kD.

Recombinant Human High Mobility Group Protein B1 is produced by our E.coli expression system and the target gene encoding Gly2-Phe89 is expressed. High mobility group protein B1 is a member of the HMGB family consisting of three members, HMGB1, HMGB2 and HMGB3. It contains 2 HMG box DNA-binding domains entitled box A and box B and it is a highly negative-charged C terminus. As a nuclear protein, HMGB1 stabilizes nucleosomes and allows bending of DNA that facilitates gene transcription which is essential for individual survival. Meanwhile, it is revealed that HMGB1 can also act as a cytokine extracellularly and regulates monocyte, T cell, dendritic cell activities in inflammatory responses.
