Description

Source: Human Cells.

MW :40.2kD.

Recombinant Human NCR3 is produced by our Mammalian expression system and the target gene encoding Leu19-Thr138 is expressed with a Fc tag at the C-terminus. Natural Cytotoxicity Triggering Receptor 3 (NCR3) along with NKp44 and NKp46 constitute a group of receptors termed "Natural Cytotoxicity Receptors". They play a major role in triggering NK-mediated killing of most tumor cells lines. NKp30 is a type I transmembrane protein having a single extracellular V-like immunoglobulin domain. NKp30 is selectively expressed both in resting and activated human NK cells. In addition, NKp30 is also involved in NK-mediated induction of dendritic cell (DC) maturation. It has been demonstrated that NK cell activation signaling specifically induces lytic activity against several tumor cell types and synthesis of new NF-?B dependent proteins during the initiation of cytotoxicity.
