

32-8250: Recombinant Human Putative Polycomb Group Protein ASXL1 (N-GST)(Discontinued)

Gene : ASXL1
Gene ID : 171023
Uniprot ID : Q8IXJ9

Description

Source: E. coli.
MW :33.6kD.

Recombinant Human Additional sex combs-like protein 1 is produced by our E.coli expression system and the target gene encoding Lys1477-Arg1541 is expressed with a GST tag at the N-terminus. Putative Polycomb group protein ASXL1 involved in transcriptional regulation mediated by ligand-bound nuclear hormone receptors, such as retinoic acid receptors (RARs) and peroxisome proliferator-activated receptor gamma (PPARG). It acts as coactivator of RARA and RXRA through association with NCOA1. ASXL1 also acts as corepressor through recruitment of KDM1A and CBX5 to target genes in a cell-type specific manner; the function seems to involve differential recruitment of methylated histone H3 to respective promoters.
