**Gene ID :** 55600  
**Uniprot ID :** Q8WWAO

### Description

Source: E. coli.  
MW :32.7kD.

Recombinant Human Intelectin-1 is produced by our E.coli expression system and the target gene encoding Thr19-Ser298 is expressed with a 6His tag at the N-terminus. Intelectin-1(ITLN1) is a secreted protein and contains 1 fibrinogen C-terminal domain. Intelectin-1 is a 40 kDa Ca-dependent galactofuranose-binding lectin that is not a C-type lectin. It is expressed on multiple cell types and appears to participate in insulin signaling and microbe recognition. The protein has no effect on basal glucose uptake but enhances insulin-stimulated glucose uptake in adipocytes. It increases AKT phosphorylation in the absence and presence of insulin and it may play a role in the defense system against microorganisms. It also may specifically recognize carbohydrate chains of pathogens and bacterial components containing galactofuranosyl residues, in a calcium-dependent manner.
