

## 32-8345: Recombinant Human Peptidyl-Prolyl Cis-Trans Isomerase FKBP3 (N-6His)

**Gene :** FKBP3  
**Gene ID :** 2287  
**Uniprot ID :** Q00688

### Description

Source: E. coli.  
MW :27.3kD.

Recombinant Human FKBP25/ is produced by our E.coli expression system and the target gene encoding Met1-Asp224 is expressed with a 6His tag at the N-terminus. FKBP3 contains 1 PPIase FKBP-type domain, belongs to the FKBP-type PPIase family. FK506- and rapamycin-binding proteins (FKBPs) constitute a family of receptors for the two immunosuppressants which inhibit T-cell proliferation by arresting two distinct cytoplasmic signal transmission pathways. FKBP3 is a cis-trans prolyl isomerase enzyme that binds the immunosuppressants FK506 and rapamycin, as well as histone deacetylases, the transcription factor YY1, casein kinase II, and nucleolin. It has a higher affinity for rapamycin than for FK506 and thus may be an important target molecule for immunosuppression by rapamycin.
