32-8351: Recombinant Human High Mobility Group Protein B1/HMGB1 (N-MARI)

Gene ID: HMGB1
Gene ID: 3146
Uniprot ID: P09429

Description

Source: E. coli. MW :10kD.

Recombinant Human High mobility group protein B1 is produced by our E.coli expression system and the target gene encoding Pro92-Val176 is expressed with a MARI tag at the N-terminus. High mobility group protein B1 is a member of the HMGB family consisting of three members, HMGB1, HMGB2 and HMGB3.It Contains 2 HMG box DNA-binding domains entitled box A and box B and It is a highly negative-charged C terminus. As a nuclear protein, HMGB1 stabilizes nucleosomes and allows bending of DNA that facilitates gene transcription which is essential for individual survival. Meanwhile, it is revealed that HMGB1 can also act as a cytokine extracellularly and regulates monocyte, T cell, dendritic cell activities in inflammatory responses.
