

32-8477: Recombinant Human Cryptic Protein (C-6His)(Discontinued)

Gene : CFC1
Gene ID : 55997
Uniprot ID : P0CG37

Description

Source: Human Cells.
MW :19.9kD.

Recombinant Human Cryptic is produced by our Mammalian expression system and the target gene encoding Met1-Gly169 is expressed with a 6His tag at the C-terminus. Cryptic (CFC1) is a member of the epidermal growth factor (EGF)- Cripto, Frl-1, and Cryptic (CFC) family. It contains an EGF-like domain, and is glycosylated on its N-terminal during post-translational modification. Cryptic is identified as a NODAL coreceptor involved in the correct establishment of the left-right axis. It may play a role in mesoderm and/or neural patterning during gastrulation. The unnormal expression of this gene may causes a series of diseases such as HTX2, Transposition of the great arteries dextro-looped 2, and Conotruncal heart malformations.
