

## 32-8508: Recombinant Human cAMP-Dependent Protein Kinase 1a/PRKAR1A (C-6His)

**Gene :** PRKAR1A

**Gene ID :** 5573

**Uniprot ID :** P10644

### Description

Source: Human Cells.

MW :44kD.

Recombinant Human PRKAR1A is produced by our Mammalian expression system and the target gene encoding Glu2-Val381 is expressed with a 6His tag at the C-terminus. cAMP-dependent protein kinase type I-alpha regulatory subunit is an enzyme that in humans is encoded by the PRKAR1A gene. cAMP is a signaling molecule important for a variety of cellular functions. cAMP exerts its effects by activating the cAMP-dependent protein kinase A (PKA), which transduces the signal through phosphorylation of different target proteins. Four different regulatory subunits and three catalytic subunits of PKA have been identified in humans. The protein encoded by this gene is one of the regulatory subunits. This protein was found to be a tissue-specific extinguisher that down-regulates the expression of seven liver genes in hepatoma x fibroblast hybrids.
