Gene : ALDH3A1

Gene ID : 218

Uniprot ID : P30838

Description

Source: Human Cells.

MW :51.4kD.

Recombinant Human Aldehyde Dehydrogenase 3-A1 is produced by our Mammalian expression system and the target gene encoding Met1-His453 is expressed with a 6His tag at the C-terminus. Aldehyde dehydrogenase, dimeric NADP-preferring is an enzyme that in humans is encoded by the ALDH3A1 gene, belongs to the aldehyde dehydrogenase family. ALDHs play a major role in the detoxification of alcohol-derived acetaldehyde. They are involved in the metabolism of corticosteroids, biogenic amines, neurotransmitters, and lipid peroxidation. This protein preferentially oxidizes aromatic aldehyde substrates. It may play a role in the oxidation of toxic aldehydes.
