

## 32-12026: Human Ciliary Neurotrophic Factor (AF)

**Gene :** CNTF  
**Gene ID :** 1270  
**Uniprot ID :** P26441  
**Alternative Name :** Ciliary neurotrophic factor

### Description

**Source:** Genetically modified E.coli.

**Predicted MW:** Monomer, 22.9 kDa (200 aa)

Ciliary neurotrophic factor (CNTF) is a neurotrophic factor that promotes the survival of neuronal cell populations, neurite outgrowth, and neurotransmitter synthesis. CNTF also plays an important protective role during nervous system injury.

### Application Note

**Endotoxin:** Less than 0.1 ng/µg (1 IEU/µg) as determined by LAL test.

Biological Activity was determined by TF-1 cell proliferation at  $\leq 325$  ng/mL;  $\geq 3.1 \times 10^3$  units/mg. Centrifuge vial before opening, Suspend the product by gently pipetting the above recommended solution down the sides of the vial. DO NOT VORTEX. Allow several minutes for complete reconstitution. For prolonged storage, dilute to working aliquots in a 0.1% BSA solution, store at  $-80^{\circ}\text{C}$  and avoid repeat freeze thaws. Upon reconstitution, a small amount of visible precipitate can be expected. A 10% overfill has been added to the total material vial to compensate for this loss.
