**Gene :** Il1b  
**Gene ID :** 16176  
**Uniprot ID :** P10749  
**Alternative Name :** Catabolin, LAF, EP, LEM, MCF

### Description

**Source:** Genetically modified E.coli.

**Predicted MW:** Monomer, 17.5 kDa (153 aa)

Interleukin 1 beta (IL-1beta ) is a pro-inflammatory cytokine that is produced by monocytes, macrophages, and dendritic cells (DCs). IL-1beta signals through the IL-1 receptor, type 1 (IL-1R1) to activate the myeloid differentiation primary response 88 (MYD88) signaling pathway, which contains the cytoplasmic Toll/IL-1 receptor (TIR) domain adapter. IL-1beta and the independently regulated IL-1alpha protein have overlapping proinflammatory activities to induce adhesion molecule expression on epithelial cells, control fever induction, initiate rheumatoid arthritis, and promote septic shock.

### Application Note

**Endotoxin:** Less than 0.1 ng/µg (1 IEU/µg) as determined by LAL test.

Biological Activity was determined by D10S cell proliferation at <=15 pg/mL; >= 6.7 x 10<sup>7</sup> unti/mg. Centrifuge vial before opening, Suspend the product by gently pipetting the above recommended solution down the sides of the vial. DO NOT VORTEX. Allow several minutes for complete reconstitution. For prolonged storage, dilute to working aliquots in a 0.1% BSA solution, store at -80°C and avoid repeat freeze thaws. Upon reconstitution, a small amount of visible precipitate can be expected. A 10% overfill has been added to the total material vial to compensate for this loss.
