32-12245: Mouse Migration Inhibitory Factor (AF)

 Gene :
 Mif

 Gene ID :
 17319

 Uniprot ID :
 P34884

Alternative Name: Macrophage migration inhibitory factor, Delayed early response protein 6, Glycosylation-inhibiting

factor, L-dopachrome isomerase, L-dopachrome tautomerase, Phenylpyruvate tautomerase

Description

Source: Genetically modified E.coli.

Predicted MW:Â Monomer, 12.5 kDa (115 aa)

Macrophage migration inhibitory factor (MIF) is a pro-inflammatory lymphokine that functions during cell-mediated immmunity. Â MIF promotes fibroblast migration by inducing interleukin 1 (IL-1), interleukin 8 (IL-8), and matrix metalloproteinase (MMP) expression. Â In interferon-gamma-activated macrophages, MIF stimulates nitric oxide (NO) production and tumor necrosis factor alpha (TNF-alpha) secretion.Â
