## 32-12296: Human RELM-beta (AF)

**Gene :** RELM-beta **Uniprot ID :** Q2UXL7

Alternative Name: RELM-beta protein Â Â Â

## **Description**

**Source:** Genetically modified E.coli.

Predicted MW:Â Dimer, 9.5/19.0 kDa (89/178 aa)

Resistin-like molecule-beta (RELM-beta) is a member of the RELM family of secreted proteins containing conserved C-terminus cysteines. The RELM family consists of Resistin (FIZZ3), RELM-alpha (FIZZ1), RELM-beta (FIZZ2), and RELM-gamma (FIZZ4). Resistin and RELM-beta are the only RELM family members found in humans, whereas all four RELM family members are present in rodents. RELM-beta functions to increase fibroblast proliferation and differentiation, resulting in airway remodelling and increased inflammation.
